

Food Processing & Pharmaceuticals

Product / Application Highlight

With the increase of precision machine technology the demand for specialized bearings that provide high performance and increased running life has increased substantially. There is a growing need for solutions that provide corrosion resistance in applications operating in demanding environments while meeting tough regulatory guidelines. The Food Processing & Pharmaceutical industries are examples where bearings & power transmission components are required operate in caustic environments or in applications that have strict wash down and cleanliness requirements.

Bearings Limited has a wide range of specialized products that meet these unique demands. These products are suited for a wide veracity of Food Processing & Pharmaceutical applications including:

Food Processing Applications:

- Canning
- Bottling
- Fish Processing
- Food Packaging
- Industrial Rendering
- Meat Packing
- Slaughter House
- Sugar Processing
- Poultry Processing
- Bakery & Snack Foods

Pharmaceutical Applications:

- Producing
- Processing
- Grinding
- Packaging
- Granulation
- Milling
- Compression
- Dispensing

Food Processing & Pharmaceuticals

Food & Pharma Solutions for Corrosion Resistant & Wash-Down Applications

TRITAN Stainless Steel Radial Ball Bearings

With inner rings, outer rings & balls are constructed of AISI 440C martensitic stainless steel and AISI 304 austenitic stainless steel for retainers, metal shields, there bearings provide the ultimate corrosion resistance in humid & caustic environments.

TRITAN Stainless bearings are lubricated with a multipurpose FDA food approved grease and are suitable for a wide variety of standard and specialized applications.

Special Features:

- High resistance to corrosion
- High stability in high temperature
- High resistance to chemicals
- Lubricated with FDA Food approved Grease

KSM & EZO Stainless Steel Radial & Miniature Ball bearings

For high precision / high speed applications that require corrosion resistance, Bearings Limited offers Japanese bearings from KSM & EZO. Meeting the exacting standards JIS, these bearings provide for high performance in high speed applications.

Food Processing & Pharmaceuticals

TRITAN Stainless Mounted Units

TRITAN Stainless Steel mounted units offer the highest level of corrosion resistance and are ideal in applications that require robust strength and durability while operating in caustic or wash down environment, providing excellent wear and extended life.

Housings are constructed of 300 grade stainless steel and are hand-polished to minimize excessive pitting and surface roughness. The solid base design eliminates gaps and crevices that act as entrapment points in competitors' products.

These all Stainless units are equipped with TRITAN Stainless steel inserts. The rings and balls are constructed of AISI 440C martensitic stainless steel and retainer, slinger & seal frame and the set screws are constructed of AISI 302 austenitic stainless. The inserts are lubricated with H1 USDA/FDA Food Grade grease

They are directly interchangeable with conventional cast iron housings, and competitors higher priced thermoplastic and stainless/chrome hybrid design units.

TRITAN Thermoplastic Mounted Units

TRITAN Thermoplastic Mounted Units offer an economic solution with a high level of corrosion resistance, and are ideal for a wide variety of wash-down applications.

Housing Material is a Reinforced PBT (Polybutylene Terephthalate) that provides extreme low water absorption, and exceptional dimensional stability. With excellent resistance to chemical attack and high environmental stress crack resistance, these units provide excellent wear properties. Housings are supplied with seamless stainless bushings and zerk fitting.

These Thermoplastic units are equipped with TRITAN Stainless steel inserts. The rings and balls are constructed of AISI 440C martensitic stainless steel and retainer, slinger & seal frame and the set screws are constructed of AISI 302 austenitic stainless. The inserts are lubricated with H1 USDA/FDA Food Grade grease

They are directly interchangeable with conventional cast iron housings, and competitors higher priced thermoplastic and stainless/chrome hybrid design units.

TRITAN Hybrid Mounted Units

In addition to the all Stainless and Thermoplastic units, TRITAN produces hybrid units on a made-to-order basis for specific application requirements. These hybrids include combinations that include not only traditional chrome and stainless inserts, but also Hard-Chrome coated and Black oxide treated inserts, and a variety of housing materials including nickel plated.

These hybrid units provide an economical solution for mildly corrosive environments

TRITAN Stainless Steel Insert Bearings

Bearings Limited also supplies the full range of TRITAN Stainless steel insert bearings. The rings and balls are constructed of AISI 440C martensitic stainless steel and retainer, slinger & seal frame and the set screws are constructed of AISI 302 austenitic stainless. The inserts are lubricated with FDA Food approved grease, and provide an excellent solutions for wash-down and or corrosive environments.

TRITAN also produces on a made-to-order basis both Hard Chrome Coated and Black Oxide treated inserts for an economical solution in mildly corrosive environments.

TRITAN Stainless Steel, Nickle Plated & Dacromet coated Precision Roller Chain

To address the power transmission needs in food processing and pharmaceutical industries, TRITAN also produces corrosion resistant precision roller chain.

Bearings Limited stocks the full line of TRITAN corrosion resistant roller chain from 25 (¼ inch) pitch to 120 (1 ½ inch) pitch

TRITAN Stainless Steel Roller Chains are used in highly corrosive and high temperature environments. Constructed of 300 grade stainless they offer optimal performance in caustic & wash-down applications.

Food Processing & Pharmaceuticals

TRITAN Dacromet Coated Roller Chain is the perfect choice where corrosion resistance and high strength is needed. Designed to provide maximum resistance to harsh environments, including salt water, fertilizer, and chemical wash-down, that is far superior to Nickel Plated, while maintaining the strength and durability of carbon steel chain.

Dacromet chain is not recommended in applications where chain may come into contact with food. TRITAN always recommends using stainless steel if food contact is possible.

TRITAN Nickel Plated Roller Chain provides an economic, high strength solution in mildly corrosive environments. While maintaining the strength of standard carbon steel roller chain, the nickel plating will improve overall life in a wide variety of applications.

Type	Carbon Steel	Nickel Plated	Dacromet	Stainless
Strength / Load	Excellent	Excellent	Excellent	Fair
Corrosion Resistance	Poor	Fair	Good	Excellent
